The seventy-ninth Annual Report of the Director of Public Health, United Provinces, for the year ending December 31, 1946

8 MAR 1949
LIBRARY

CHAPTER I

METEOROLOGY

The cold weather period : January and February.—January was one of the driest month on record. The draught was broken in the second week of next month when widespread precipitation occurred in the hills of western United Provinces. Rainfall in February was in large excess in east United Provinces and practically normal in the west. Maximum temperature was in pronounced excess in January and February. Minimum temperature was practically normal in January and above normal in February. Relative humidity was normal in January and above normal in February.

The hot weather period : March to May—Rainfall was in large defect in March. During April it was abundant. Vigorous thunder-storm activity was in evidence in the month of May. Rainfall was also in large excess. Maximum and minimum temperatures, cloud and humidity were nearly normal in March. Maximum temperature was below and minimum was above normal in the months of April and May. Humdity was also above normal in these months.

Monsoon period : June to September—Fairly widespread thunder-showers occurred in north-west United Provinces in the first half of June. The south-west monsoon advanced into the east United Provinces on the 17th and was established over the entire province by the last week of the month. Rainfall in the month was in slight to moderate defect over the province. Throughout July, rainfall was widespread and was very heavy in Kumaun hills. The total rainfall of the month was in moderate excess throughout the province. The monsoon was only moderately active in August. In September total rainfall was in moderate to large defect over the province. Maximum temperature was below normal, minimum temperature was practically normal and humidity generally above normal in June and July. Maximum and minimum temperatures were above normal and humidity nearly normal in August and September.

The retreating monsoon period : October to December—During the first three weeks of October local thunder-storm activity was generally experienced. The total rainfall of the month was in moderate to large excess. Weather in November was mainly dry except for two wet spells in the beginning and end of the month. The same generally was the case in December. Maximum temperature was below normal in October and November and above normal in December. Minimum temperatures and humidity were above normal throughout the season.

Taking the year as a whole, total rainfall was normal both in east and west United Provinces.

CHAPTER II

Vital Statistics

The following are the chief statistical data for the year 1946 :

(a) *Comparison of provincial figures with those of preceding year* :—

—	Total		Rural		Urban	
	1946	1945	1946	1945	1946	1945
Mid-year estimated population.	58,547,092	57,885,878	50,934,563	50,430,410	7,612,529	7,455,468
Total births ..	1,459,738	1,580,961	1,209,795	1,317,663	249,943	263,298
Birth-rate per mille.	24·93	27·31	23·75	26·13	32·83	35·32
Total deaths ..	918,834	1,096,985	761,067	917,942	157,767	179,043
Death-rate per mille.	15·69	18·95	14·94	18·20	20·72	24·01
Infantile deaths	161,358	194,761	118,966	145,884	42,392	48,877
Infant death-rate per thousand births.	110·54	123·19	98·34	110·71	169·61	185·63

(b) *Comparison by communities in the province*:—

—	Birth-rate per mille		Death-rate per mille	
	1946	1945	1946	1945
Hindus	25·08	27·50	15·96	19·36
Muslims	26·28	28·53	15·74	18·45
Europeans and Anglo-Indians ..	11·87	13·56	3·89	4·73
Indian Christians	16·33	18·35	8·31	9·13
Other classes	4·56	5·81	2·27	2·81

(c) *Comparison of birth and death-rates of United Provinces with those of other provinces for the year 1946*:—

Province	Birth rate per mille	Death rate per mille	Rate of natural increase	Infant mortality per thousand births
1. United Provinces	24·93	15·69	9·24	110·54
2. Bombay	33·20	23·04	10·16	162·78
3. Madras	33·38	19·93	13·45	146·88
4. Central Provinces	37·00	27·07	9·93	202·74
5. Punjab	37·60	18·00	19·6	134·0

Birth-rate for the province (24·93) was lower than that in the previous year (27·31) and in the year preceding that (25·09). It was also lower than the mean of the previous five years (27·88). The death-rate for the province (15·69) was also lower than that of the previous year (18·95) and of the year preceding that (18·74), and was also lower than the mean of the previous five years (18·94).

2. *Registration of vital statistics*—(*a*) Reporting of births and deaths is compulsory in urban areas, and prosecutions were instituted for failure to report. Causes of death, as reported to municipal authoritise, were verified by health authorities and a certain percentage of them was found incorrect.

(*b*) In rural areas where registration is not compulsory medical officers of health check omissions, as well as inaccuracies as to cause of death registered by village *chaukidars*. Out of 12,93,809 birth and death entries so verified 21,487 omissions were found.

CHAPTER III

General Health of the Province and the History of chief diseases.

Cholera—was responsible for 50,663 deaths (2,045 in towns and 48,618 in rural areas), against 77,345 in the previous year. Nearly all districts were affected. Following the explosive outbreak in early May a large scale epidemic drive was undertaken, by employing up to 100 extra Medical Officers and 100 Nursing Orderlies. One ambulance for transport of patients was sanctioned for each district and, pending their procurement, 20 vans of the Field Publicity Organisation were lent for the purpose. Later on Government sanctioned the supply of one Jeep Car with trailer in 30 districts for quick movement of personnel and supplies. Restrictions for a period of six months were imposed on sale of food, ice, ice-cream and *sharbats* in all municipalities and notified areas, and at all fairs in rural areas, and were found of considerable help in checking the spread of cholera. Over 2,275,300 anti-cholera inoculations were performed against 3,373,600 in the year 1945. The latter figure includes inoculations given specially for the Adh Kumbh Mela and is therefore higher.

The system of obtaining epidemic intelligence was simplified by the introduction of certain changes in procedure. A payment of annas four from the provincial revenues was also authorised for village *chaukidars* who are required to submit these reports each week in time to their police stations.

During an explosive outbreak enough Medical Officers are not available immediately for Infectious Hospitals and other anti-epidemic measures. It has been decided that when staff at the disposal of Government and local bodies proves insufficient for such a situation male medical practitioners up to the age of 40 may, as necessary, be required by District Magistrates to work on anti-epidemic duties. Standard regulations under the Epidemie Diseases Act to regulate

such requisition have been drawn up and will be enforced as and when necessary. The scales of remuneration for medical practitioners when so required to work have also been laid down.

2. *Plague* caused a good deal of anxiety, particularly in Bundelkhand and the city of Kanpur where it broke out after many years. Total number of deaths from this cause in the province was 8,206 (2,186 in towns and 16,020 in rural areas) against 14,024 in th previous year. Over 1,237,700 inoculations were performed against 535,500 in the previous year. Anti-rat campaign by cyanogassing was undertaken in affected areas, along with the spraying of D.D.T. in infected premises. Anti-plague inoculation was given on a large scale. Evacuation was also advocated for which necessary alternative accommodation was provided along with chaukidars for watch and ward of evacuated villages. Some 45 temporary hospitals were put up in the affected areas where treatment by sulpha drugs was given. The recovery rate was good, being 85 per cent. of admissions. In the later phase of the epidemic one Ambulance unit and one unit of the Field Hygiene Section of the Defence Department worked with civil health authorities in Gorakhpur division for one month.

3. *Small-pox* caused 5,608 deaths (728 in urban areas and 4,880 in rural areas) against 22,128 in the previous year. The districts of Ghazipur, Azamgarh and Faizabad showed the highest incidence.

4. *Fevers*—This general heading comprises malaria, enteric fever, measles, relapsing fever, kala-azar, influenza, cerebro-spinal fever, typhus fever and other fevers. The mortality from all fevers was 696,436 against 813,592 in the preceding year. The decrease is primarily under malaria.

The incidence of the more important of the fevers is discussed below :

(*a*) *Malaria*—The number of deaths registered under this head was 616,708 (24,888 in towns and 591,820 in rural areas) against 723,414 in 1945. All these cases could not however have been of malaria, as the remarks in Chapter VII will show.

(*b*) *Relapsing fever*—Two hundred and thirty-three deaths (40 in towns and 193 in rural areas) were registered under this head, against 381 in 1945.

(*c*) *Enteric fever* was responsible for 9,355 deaths (3,868 in urban areas and 5,487 in rural) against 9,317 in 1945. Over 26,300 c.cs. of TAB vaccine were issued, mostly under the scheme for the inoculation of Government servants.

(*d*) *Kala-azar* was responsible for 132 deaths (70 in urban and 62 in rural areas) against 128 in 1945. These figures are greatly under-reported as actual experience shows. Two travelling dispensaries in Gorakhpur and one in Banaras district continued to work exclusively on survey and detection of such cases, and for sending on the more advanced ones to Sadar Hospitals and branch dispensaries equipped for such treatment.

Sanction has now been given to the creation of 20 units for such survey and treatment, and they are to function from June, 1947.

(*e*) *Influenza* was responsible for 394 deaths (186 in urban and 208 in rural areas) against 506 in 1945.

(*f*) *Cerebro-spinal Meningitis* was responsible for 56 deaths (45 in urban and 11 in rural areas) against 85 in 1945 and was as usual sporadic in incidence.

5. *Respiratory diseases* were responsible for 33,553 deaths (27, 709 in urban and 5,844 in rural areas) against 38,329 in the previous year. Pneumonia and pulmonary tuberculosis are the main diseases in this group. Their incidence is discussed below :

(*a*) *Pneumonia* was responsible for 13,653 deaths (13,319 in urban and 334 in rural areas) against 16,479 in 1945.

(*b*) Tuberculosis (pulmonary) was responsible for 4,594 deaths (3,743 in urban and 851 in rural areas) against 4,976 in 1945.

Tuberculosis of other forms for official statistical purpose is not included under "Respiratory diseases" but is discussed here to indicate the incidence of this disease in all its forms. Tuberculosis of bones was responsible for 411 deaths (100 in urban and 311 in rural areas) against 256 in 1945. Other turbercular diseases were responsible for 2,308 deaths (1,535 in urban and 773 in rural areas) against 2,446 in 1945.

Educational work on the cause and prevention of tuberculosis was carried on at local clinics aided by the United Provinces Tuberculosis Association where some 3,000 persons were treated. An expansion of Tuberculosis work in its educational and preventional aspect is under consideration. A film trailor on Tuberculosis, of which 50 copies have been made by this department is being shown at cinema houses. Illustrated posters and booklets on Tuberculosis were also supplied to over 4,500 schools with Junior Red Cross groups.

6. *Dysentery and diarrhoea* were responsible for 16,010 deaths (12,236 in urban and 3,774 in rural areas) against 19,388 in 1945.

7. *Beri-Beri* was responsible for 63 deaths (49 in urban and 14 in rural areas) against 64 in 1945.

8. *Epidemic dropsy* has been appearing from time to time in some cities of eastern United Provinces. The question of applying a proper control over the fraudulent admixture of the seeds of Argemone mexicana to mustard seeds, which gives rise to this disease is under consideration.

9. *Injuries* were responsible for 13,302 deaths of which 1,190 were from suicide, 9,135 from wounds or accidents, 2,659 from snake-bites, 121 from rabies and 197 from injuries caused by wild animals. The corresponding figures for 1945 were 1,143 from suicide, 8,784 from wounds or accidents, 2,331 from snake-bites, 124 from rabies and 286 from injuries caused by wild animals.

10. All other causes claimed 85,056 deaths against 99,511 in 1945.

11. *Deaths at child-birth* (i.e. maternal mortality) numbered 1,963 (1,558 in urban and 405 in rural areas) against 2,361 in 1945. These figures are quite inaccurate as reporting is particularly defective under this head.

12. *Leprosy* was responsible for 491 deaths (135 in urban and 356 in rural areas) against 752 in 1945. The United Provinces Branch of the British Empire Leprosy Relief Association continued to aid five local clinics, and maintained the Special Leprosy Officer. About one thousand patients received treatment at these local units, of whom some 250 showed definite improvement. The Leprosy Officer surveyed 443 villages in Sitapur district and found lepers in 370 of them. He undertook treatment and follow-up of cases on usual lines.

13. *Goitre* has been chronic in the Jaunsar-Bawar pargana of Dehra Dun district, and in parts of Almora. An experimental scheme for the distribution of iodised salt to people in the Jaunsar-Bawar area was approved and is being worked out.

Facilities for treatment of infectious diseases in urban areas are meagre. Government ordered an enquiry into the state of buildings, equipment and staff of existing Infectious Hospitals. For the smaller towns where such hospitals cannot have sufficient work throughout the year Government are constructing detached blocks in the premises of existing hospitals, where treatment will be given by the hospital staff.

CHAPTER IV

Fairs and Festivals

Measures to safeguard health and maintain sanitation at annual fairs were organised by the Public Health staff and there was not serious epidemic outbreak in any of them. Inoculation against cholera as a condition of entry into the mela area at Ajodhya was imposed for the Sawan Jhula fair and on the pilgrim route to Badrinath and Kadarnath in Garhwal.

Most of the fairs are managed by local bodies whose finances are proving inadequate to meet higher standard of sanitation required at these gatherings.

CHAPTER V

Urban Sanitation

The maintenance of municipal conservancy continues to be difficult owing to high prices of labour and material. The public is demanding a better standard of sanitation which boards have not been able to provide, and there is endless complaint. There were sweepers' strikes at many places.

2. *Housing*—There is acute shortage of houses in most of ou towns. The Development Board of Kanpur, and the Minicipal Roards of some other places, have schemes for providing building plots. The

Provincial Government have also the matter under considerat on. In Banaras some by-laws were made by the Municipal Board to regulate the erection of new houses in private open land with sufficient wide lanes.

3. *Conversion of town refuse into agricultural compost* was continued and at the end of July, 1946 was being done in 61 places. Over 3,859,000 tons of compost manure was prepared against 53,300 in the previous year, most of which was quickly sold. In western United Provinces there is greater appreciation of the value of such compost and little prejudice in handling it. Small subsidies, including free transport to cultivators' fields, were given in some of the eastern districts to popularise its use. Experiments show that one ton of dry compost applied to crops yielded about one maund of extra foodgrain, and two and half maunds of extra straw. The cost of manufactured compost works out to 1/6th of the cost of castor cakes or sulphate of ammonia.

4. *Utilisation of sewage for agricultural purposes*—The connected scheme of utilising town sewage for agriculture was investigated by a Sewage Utilisation Committee appointed by the Provincial Government with the Director of Public Health as Chairman. The Committee's recommendation have been submitted to Government.

CHAPTER VI

Rural Sanitation

Advice was given to the Rural Development staff and to villagers on the construction of sanitary works and the improvement of wells. The Health Unit at Pratapgarh served as a training ground in rural health work. An experiment on the types of septic tanks was carried out there and one suitable to United Provinces conditions has been worked out.

2. *Expenditure by district boards on public health*—The total income of district boards in the province from all sources including Government grants, during the year 1945-46 was Rs.3,08,90,913.

Total amount spent by them on public health was Rs.8,93,998 as detailed below :

	Rs.
(i) Vaccination	4,33,659.
(ii) Public Health establishment other than vaccination	2,87,879.
(iii) Epidemic	52,062.
(iv) All other public health purposes ..	1,20,398.

CHAPTER VII

Malaria

Malaria was prevalent more or less to the same extent as in the previous year, 12 districts having been affected, including some visited

by floods. Quinine and its substitute was distributed as usual. In hyper-endemic areas of 21 districts treatment scheme by quinacrine hydrochloride was started. D.D.T. as available was used for anti-mosquito purposes, primarily in labour camps attached to canal constructions and in Police lines.

2. Field trials of Paludrine for treatment of malaria were carried out in two selected hyper-endemic areas of Naini Tal terai. The numbers treated were too small to permit definite conclusions, but there was evidence that the drug controlled malarious attacks quicker than Mepacrine, and that no toxic effects were noticed.

3. Blood-films and mosquito collections from epidemic districts and other sources were examined. Out of a total of 2,528 slides only 447 or 17·20 per cent. were found to be positive, which accords with the finding in the previous year and shows that all kinds of illness which have fever as the primary symptom are labelled malaria.

4. Constructions for a large hydro-electric scheme were started in an hyper-epidemic area of Naini Tal terai. The Malaria Branch put up an organisation to protect the health of workers there.

5. A separate organisation for anti-malaria work in districts has been found to be necessary for some time, as the district health staff cannot give the continued attention that anti-malaria works demand. Six anti-malaria units were sanctioned during the year for six of the most malarious districts and will begin to work in July 1947. Each unit is to be in charge of a Medical Officer experienced in-malaria work. A field laboratory, two Malaria Supervisors and necessary labour form part of each unit.

A provision of rupees five lakhs has also been made for drainage and items of anti-malaria work which may be found necessary after surveys to be made by these units.

6. *Sale of quinine and substitutes*—This department is the agency for distribution of all quinine and cinchona (powder and tablets), and quinine substitutes required by Government departments, hospitals and dispensaries, and by such medical practitioners and chemists as agree to take it on specified conditions. A total of 6,139 lb. of quinine, 1,509 lb. of cinchona, 76,35,500 tablets of quinine substitutes, and 2,765 boxes of injectible quinine was sold during the year to these agencies.

CHAPTER VIII

Maternity and Child Welfare

The number of medical women, health visitors and assistant midwives employed during the year, including those pertaining to the Rural Development Scheme, was 17, 30 and 317 respectively against 1,532

and 335 in the previous year. There was a slight improvement in the supply of candidates for health visitors' training but none for assistant midwives. Government raised their grant-in-aid for Maternity and Child Welfare by a further sum of Rs.1,24,000 to allow of an increase in the salaries of workers and provide extra equipment and staff at the centres.

2. Three hundred and thirty-one centres functioned during the year against 349 in 1945. Some 47,491 confinements were conducted by these centres, against 43,715 in the previous year. Some 1,300 abnormal cases were sent to the hospital by the Maternity staff. Infantile mortality among cases so conducted was 39·9 per thousand births, against 126·3 in the group not confined by them. Mortality rate among mothers whose confinement had been conducted by the trained staff was 2·08 per thousand. No reliable figure in respect of cases not attended by trained staff is available.

3. The training of health visitors and assistant midwives was continued at the Silver Jubilee Health School. Nine of the former and 14 of the latter qualified during the year. Training of *dais* was continued at various centres. Three hundred and seventy-nine of these were awarded local licence to practise in their areas.

4. *Finance.*—The Provincial Government gave a sum of Rs.2, 86,600 as grant-in-aid for Maternity and Child Welfare centres in the province. The United Provinces Branch of the Indian Red Cross Society gave a sum of Rs.14,000. The Centre Headquarters of the Red Cross provided a sum of Rs.5,600 for specified purposes. Miscellaneous receipts and interest amounted to Rs.19,175. Grants from municipal and district boards to local centres, amounting to Rs.2,09,056 made up for the rest of the expenditure.

CHAPTER IX

Health of the School Child

Medical inspection of scholars is conducted by whole-time school health officers in 13 larger towns and by municipal and district medical officers of health in other places. For English middle and high schools the scheme of examination is somewhat detailed. For other institutions it is less so.

Examinations on detailed lines were conducted in 264 out of 353 institutions specified for the purpose, and 33,610 scholars out of about 141,200 on roll were seen. For ordinary examinations 1,616 institutions out of 6,870 subject to the scheme were visited, and 96,600 out of 5,87,100 boys on roll were examined and advised.

2. *Defects.*—The following is a table of the main defects noticed in urban and rural group of scholars. Figures for the previous year have been given for purpose of comparison :

Nature of defect	Percentage of cases found defective			
	Urban		Rural	
	1946	1945	1946	1945
1. Poor nutrition ..	16·2	19·6	10·1	19·7
2. Teeth and gums	6·1	8·6	9·2	8·2
3. Pyorrhoea	1·6	1.7	3·4	2·0
4. Tonsil and adenoids	13·0	13·9	2·1	5·2
5. Mouth breathing	2·8	3·8	1·2	1·1
6. Other glandular enlargements ..	4·3	4·4	0·6	1·2
7. Diseases of eyelids	4·5	6·2	3·9	3·7
8. Defective vision	9·3	9·0	1·2	1·6
9. Enlarged spleen	0·7	1·0	4·3	4·4
10. Skin diseases	3·9	2·0	2·8	3·4
Boys with one defect only ..	35·2	40·0	28·6	25·1
Boys with more than one defect ..	16·8	16·6	6·3	6·2

3. *Correction of defects.*—In 13 places where separate clinics exist for the treatment of scholars, 87,260 cases were treated. Some 926 cases of refraction were seen by honorary opthalmologists, and 1,743 dental cases by honorary dentists attached to some of these clinics. Two hundred and seven pairs of glasses were supplied free to boys in indigent circumstances.

4. Talks on individual needs were given to the boys by school health officers during examination. Parents are encouraged to visit the clinics along with their children requiring detailed examination and to discuss these needs.

5. *Milk feeding schemes* subsidised by Government were started at primary schools in Lucknow and Kanpur. Eight ounces of milk was supplied under this scheme to each scholar on alternative days and a payment of six pies was required from each. For those in indigent circumstances this payment was made by the respective Municipal Boards. Recoveries at this rate amount to Rs.5 per maund against

Rs.18-8-0 per maund in Lucknow and Rs.17-8-0 per maund in Kanpur at which the milk is obtained by the Co-operative and Animal Husbandry Departments working the scheme. The balance of the cost is met by the Provincial Government.

In Kanpur, part of the milk secured under this scheme is issued to Labour and Child Welfare centres at cost price, and constitutes some measure of assistance as the market rate of milk in the city is over Rs.25 per maund.

A privately sponsored milk-feeding scheme was started in a Girls' High School in Lucknow. Here 8 oz. of boiled skimmed milk is supplied to each scholar every day along with some toffey and fruits. A sum of Rs.2-8-0 is realised from each of them. Free and half-rate concessions have been allowed. This scheme is self-supporting.

6. *Multi-vitamin tablets* have been supplied to Maternity centres and to School Health Officers for issue to persons under their care whose nutrition may require to be fortified.

CHAPTER X

Health Education

Health education was as usual carried on by officers of the Hygiene Publicity Bureau, by district, municipal and school health officers, and to a small extent by medical officers of dispensaries. Lectures illustrated by magic lantern slides, posters and leaflets were used. Propaganda on the need for balanced diets and how to secure them, and on tuberculosis, was specially included. Articles were contributed to the press. Some talks were given on the Radio. The publicity van gave 50 demonstrations in 14 districts, to an approximate gathering of one lakh. Health exhibitions were organised at several places. Lectures on the prevention of blindness were given in some schools, and publicity material was supplied to pupil teachers in training colleges and normal schools. Some literature was also supplied to Junior Red Cross groups.

2. *Red Cross.*—Over 1,08,800 scholars (of whom 1,757 were girls) were registered in 5,785 Junior Red Cross groups in 4,458 schools during the year, against 1,08,680 scholars in the previous year. Over 95 per cent. of the membership was in primary schools. These groups did some health education in their areas. One hundred and thirty-four of these groups which were more active, received a gift of one First Aid outfit each.

3. *St. John Ambulance Association.*—The total number of persons trained in various courses of the Association and granted certificates was 3,020 against 3,455 in 1945. In addition 2,909 certificates were granted to school children in First Aid, Hygiene and Sanitation by the lower standard against 4,433 in 1945.

4. The number of Ambulance divisions at the close of the year was 33 with a total strength of 858 members against 36 and 932 in 1945. The number of Nursing divisions was 8 with a total strength of 183 and that of cadet divisions of boys and girls was 47 with a membership of 1,040. Ambulance divisions worked at several fairs.

CHAPTER XI

Public Health Administration

Budget grants.—The revised budget of the Public Health Department for the year 1946-47 was Rs.77,62,100 including allotments for Public Health Engineering Section and for grants for sanitary works. Out of this, Rs.61,06,700 was for activities directly controlled by the Director of Public Health. The actuals for the year 1945-46 for the entire department was Rs.45,10,996 of which Rs. 3,820,396 was for activities controlled by the Director of Public Health.

CHAPTER XII

Vaccination

There are 443 towns in the United Provinces for purposes of vital statistics. Vaccination was compulsory in 264 of them. Taking the figures for all towns, 412,657 persons were vaccinated or re-vaccinated in the year, against 682,885 in 1945. In the rural areas 1,641,998 persons were vaccinated or re-vaccinated against 1,811,848 in 1945. The decrease in both cases is under re-vaccinations, the figures of the year 1945 being higher owing to a special re-vaccination drive.

The approximate number of children under one year of age available for vaccination in 1946 was 207,551 in towns and 1,090,829 in rural districts, of whom 140,067 and 721,582 respectively or 67·5 and 66·2 per cent. were vaccinated. The number vaccinated in the age group 1—5 years was 45,863 in towns and 340,433 in rural districts.

2. The number of vaccinations performed in 1946 was 2,062,714 (1,396,138 primary and 666,576 re-vaccinations), against 2,569,156 (1,389,447 primary and 1,179,709 re-vaccinations) in 1945. The percentage of successful vaccination in which results were known was 97·60 in the case of primary operations and 76·05 re-vaccinations. No case of encephalitis following vaccination was reported.

3. *Government Vaccine Depot*—The amount of vaccine lymph manufactured was 202,648 grammes against 238,397 grammes in 1945. The quantity issued during the same period was 233,295 grammes against 201,863 in the previous year.

CHAPTER XIII

Other Public Health Services

Travelling dispensaries as units of Medical and Public Health work in this province are closing down owing to non-availability of medical officers. Some five or six only remain now. In their place a cadre of 180 Epidemic Assistants has been created for field epidemic work including inoculations. These are persons who have passed the five years' course in Indian Medicine and have been trained by this department in inoculation, disinfection, etc.

2. *Hygiene Institute*—The Institute conducted courses and the connected examinations for sanitary inspectors, epidemic assistants, and health visitors, besides the course in hygiene for the M. B., B. S., of the Lucknow University. It analysed and gave opinion on over 1,680 samples of water, food, chemicals, and pathogenic material submitted to it by Medical Officers of Health and others, and continued to apply control check over local analysis of public water supplies. Officers of the Institute also carried out an investigation into an outbreak of food poisoning in a school in Dehra Dun, and on gastro-enteritis and epidemic dropsy at several places.

3. *Manufacture of cholera vaccine* —Over 1,635,500 c.cs. of cholera vaccine were manufactured.

4. *Anti-Rabic treatment*—Some 17,790 patients were admitted to treatment against 13,692 in the preceding year. Approximately 82 per cent. of the patients had been bitten by dogs and the rest by jackals and other animals. Over 603 patients were assessed to payment for the treatment.

Food and Nutrition

5. *Food and drugs adulteration*—The number of samples of food and drugs submitted to the Public Analyst for analyses was 13,378 against 11,751 in 1945. The following table shows the result of analyses :

Name of food samples	Number of samples received for analyses in 1945	Percentage of adulteration	
		1946	1945
1. Ghee	2,854	24·55	14·99
2. Milk	6,006	45·69	40·40
3. Butter	135	37·69	39·55
4. Flour	1,375	23·88	15·34
5. Edible oils	1,574	10·20	19·03
6. Miscellaneous	1,434	29·63	22·58

6. Number of cases sent up for prosecution was 4,414 of whom 3,644 resulted in conviction. The average fine inflicted for the offence of adulteration was as follows :

Cases tried by Stipendiary Magistrates :

	Rs.	a.	p.
(*a*) For first offence	51	5	0
(*b*) For subsequent offence	221	2	0

Cases tried by Honorary Magistrates :

(*a*) First offence	38	8	0
(*b*) For subsequent offence	66	4	0

A sum of Rs.44,356 as additional fine was realised to cover the cost of analyses in cases resulting in prosecution.

7. *Publicity and education*—The department prepared a booklet on how to balance diets under present conditions and issued it to Medical Officers of Health and Maternity and Child Welfare workers. Government appointed a Nutrition Committee with the Director of Public Health as member to advise in connection with their rationing schemes.

CHAPTER XIV

Industrial Hygiene

Medical Officers of Health inspected factories for sanitation, and for provisions made for health, safety and convenience of workers, and made recommendations as necessary. In the case of a chemical works the Medical Officer of Health advised provision of masks for workers in its chromate section, and of chimney with proper hoods over the nitre pans in its acid manufacturing section.

Some nuisance has been caused by the discharge of trade wastes into the public sewers in Kanpur. By-laws to regulate such discharge have now been framed and provide for screening of the effluent through 1/2 inch mesh, the provision of chemical in settling tanks to reduce suspended solids to 50 parts per 100,000 or less, and reduction of temperature at the point of discharge into public sewers to 100°F or less. The Medical Officer of Health has been empowered to take samples to check compliance with these regulations.

The Kanpur Municipal Board maintain a smoke-nuisance department which made 437 inspections and issued 43 notices and three statutory warnings.

Complaints of nuisance of various type, e.g. noise or that from trade wastes or floating particles of cotton flakes or storage or packing of tobacco and chillies, or storage, discharge, loading and transport of molasses, are becoming numerous. Small industries not coming within the purview of the Factories Act, when established in the

middle of inhabited site, cause the largest amount of nuisance. In rural areas the need for controlling on proper lines housing of operatives employed in sugar or other mills, and the proper disposal of trade wastes, is being increasingly felt. Planning with the help of Health and Factory Departments previous to the establishment of a new industry would eliminate these defects. Pending amendment of the Factories Act to enforce such previous scrutiny, persons desiring to establish new factories have been advised by Government to consult these authorities beforehand.

General

The year has been a difficult one owing to widespread outbreak of cholera and plague in the province. Overcrowding in towns with growing insanitation calls for immediate attention.

PATWA DANGAR,
(DISTRICT NAINI TAL) :
June 30, 1947.

A. C. BANERJEA,
Director of Public Health,
United Provinces.
